**Subject:** Re: South Jersey Ice Update for 7-31-2016

Highlights for 7/31/16:

- Ammonia system pressure was monitored as indicative of potential liquefied ammonia remaining in the system.
- Active ventilation of the building continued.
- Approximately 500 gallons of melt water was recovered.
- To date, approximately 8,000 pounds of ammonia has been removed from the system.

Objectives for 8/1/2016

- Continue monitoring refrigeration system and collecting ammonia in the high pressure receiver as the system thaws for recovery as needed.
- Continue ventilation of building.
- Continue recovery of melt water.
- Continue to inform the public of ongoing activities.
- Continue coordinating efforts with all interested parties.
- Continue air monitoring.

Sitrep for 7/31/16 activities:

Active ventilation of the building continuing. Approximately 500 gallons of melt water were recovered. Building ventilation and pumping of melt water will continue through the weekend. Ammonia system pressure will be monitored daily. The next system check by the ammonia contractor will be [on Wednesday, August 3<sup>rd</sup>](#).

The next Pollution Report will be issued [on Monday, August 1, 2016](#).
